The Snap Circuits Kit uses electronic blocks that snap onto a clear plastic base grid to build different circuits. These blocks have different colors and numbers on them so that you can easily identify them. Build the circuit shown by placing all the parts with a black 1 next to them on the clear plastic base grid first. Then, assemble parts marked with a 2, then the parts marked with a 3, and finally, the part marked with a 4. Install a 9V alkaline battery (not included) into the battery holder (B5). Place the base grid into the blue stand (with the speaker closest to the stand) and carefully stand it up, facing across a room.

Turn on the switch (on B5). You hear an alarm sound for a few seconds on start-up and then whenever the circuit detects motion in the room.

If you have any problems, contact Elenco®

**Project #1  Motion Detector**

The Snap Circuits Kit uses electronic blocks that snap onto a clear plastic base grid to build different circuits. These blocks have different colors and numbers on them so that you can easily identify them. Build the circuit shown by placing all the parts with a black 1 next to them on the clear plastic base grid first. Then, assemble parts marked with a 2, then the parts marked with a 3, and finally, the part marked with a 4. Install a 9V alkaline battery (not included) into the battery holder (B5). Place the base grid into the blue stand (with the speaker closest to the stand) and carefully stand it up, facing across a room.

Turn on the switch (on B5). You hear an alarm sound for a few seconds on start-up and then whenever the circuit detects motion in the room.

---

**Project #2  Siren Motion Detector**

Use the circuit from project #1. Remove the 2-snap wire at point C, but keep it connected at point B. The circuit works the same way, but sounds like a siren.

---

**Project #3  Alarm Motion Detector**

Use the circuit from project #1. Remove the 2-snap wire from points B and C and connect it across points A and B. Now it sounds like an alarm.

---

**Project #4  Police Car**

Build the circuit shown here and turn on the switch. It makes a siren sound like a police car.

---

**Project #5  Fire Engine**

Use the circuit from project #4, but add a 2-snap wire across points A and B. Now it sounds like a fire engine.

---

**Project #6  Machine Gun**

Use the circuit from project #4, but add a 2-snap wire across points B and C. Now it sounds like a machine gun.

---

**Project #7  European Siren**

Use the circuit from project #4, but add a 2-snap wire across points A and D. Now it sounds like a European siren.
OTHER SNAP CIRCUITS PRODUCTS!

Snap Circuits Jr.  Model SC-100
Build over 100 projects, contains over 30 parts.

Snap Circuits  Model SC-300
Build over 300 projects, contains over 60 parts.

Snap Circuits Pro  Model SC-500
Build over 500 projects, contains over 75 parts.

Snap Circuits Extreme  Model SC-750
Build over 750 projects, contains over 80 parts, and PC interface included.

Musical Recorder  Model SCP-01
FM Radio  Model SCP-02
Music Box  Model SCP-04
Space Battle  Model SCP-05
Flying Saucer  Model SCP-06

BATTERIES:
Use only 9V alkaline type (not included). Insert battery with correct polarity. Non-rechargeable batteries should not be recharged. Rechargeable batteries should only be charged under adult supervision, and should not be recharged while in the product. Do not mix alkaline, standard (carbon-zinc), or rechargeable (nickel-cadmium) batteries. Remove batteries when they are used up. Do not short circuit the battery terminals. Never throw batteries in a fire or attempt to open its outer casing. Batteries are harmful if swallowed, so keep away from small children.

Troubleshooting:
• If no sound is heard, then make sure your assembly is correct and that all connections are securely snapped.
• If the motion detector never shuts off, or siren sounds abnormal, then replace your batteries.

Contact Elenco® to find out where you can purchase these products.
